Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

Read more about Early Journal Content at http://about.jstor.org/participate-jstor/individuals/early-journal-content.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

PREVALENCE OF DISEASE.

No health department, State or local, can effectively prevent or control disease without knowledge of when, where, and under what conditions cases are occurring.

UNITED STATES.

CURRENT STATE SUMMARIES.

California Report for the Week Ended September 15, 1917.

CURRENT STATE SUMMARIES.

California Report for the Week Ended September 15, 1917.

The California State Board of Health reported concerning the status of preventable diseases in California for the week ended September 15, 1917, as follows: Three cases of smallpox were notified in the State, 1 in Fresno County and 2 in the city of San Francisco. The numbers of cases of diphtheria, scarlet fever, and whooping cough indicated increases in the prevalence of those diseases. Of 28 cases of diphtheria notified, 13 were in San Francisco and 6 in Los Angeles. Forty cases of typhoid fever were notified during the week. The prevalence of other notifiable diseases continues about the same as during the previous week.

The details of notifiable disease cases reported during the week ended September 8, 1917, are as follows:

Cerebrospinal meningitis	1	Mumps	44
Chicken pox	26	Pneumonia	25
Diphtheria	24	Poliomyelitis	3
Dysentery	3	Scarlet fever	23
Erysipelas	2	Smallpox	2
German measles	15	Syphilis	19
Gonococcus infection	45	Trachoma	1

TUBERCULOSIS.

See Diphtheria, measles, scarlet fever, and tuberculosis, page 1545.

TYPHOID FEVER.

Indiana—South Bend—Outbreak.

September 17 a report was received of the existence of an outbreak of typhoid fever at South Bend, Ind. Surgeon Cobb of the United States Public Health Service was immediately ordered to South Bend with the laboratory car, Wyman, and its complete personnel.

ARE YOU SAVING Your Money to Invest in the SECOND LIBERTY LOAN?

TYPHOID FEVER—Continued.

Surgeon Cobb reported September 19 that 88 cases of typhoid had been reported since September 1. The first group of cases was reported September 12. Of the cases 76 were reported during the 7 days September 13 to 19.

Kansas—Leavenworth County.

During the week ended September 15, 1917, 5 cases of typhoid fever were notified in Leavenworth County, Kans., making a total of 216 cases reported in the county, including the city of Leavenworth, since January 1, 1917.

Mississippi—Moselle.

During the period from September 2 to 13, 1917, 22 cases of typhoid fever were notified at Moselle, Jones County, Miss. Moselle has a population of about 250.

Tennessee—Chattanooga and Vicinity.

During July there were reported to the health department of Chattanooga 25 cases of typhoid fever, during August 71 cases, and during the first 7 days of September 2 cases. This number of cases in a city the size of Chattanooga constituted an unusual prevalence. The following conclusions are taken from the report of Surg. L. L. Lumsden, of the Public Health Service, who investigated the outbreak: That there was in Chattanooga in July and August of 1917 an unusually high prevalence of typhoid fever constituting not what should be regarded as a "severe epidemic" but which may be conveniently designated as an "acute outbreak"; that the outbreak began about July 15, and practically terminated by August 15; that from August 15 to September 7 the occurrence of typhoid fever in Chattanooga had not been in excess of the usual local rate for this period of the year; that in the period of the outbreak there developed in the city from locally spread infection about 75 cases in excess of the average number for corresponding periods of the last several years; that the period of causation of the outbreak was between June 25 and August 1, with its maximum between July 10 and July 20.

The outbreak of typhoid fever in Chattanooga in July and August of 1917 may have been contributed to by scattering cases caused by infection conveyed by various agents from various sources, but the vast majority of the cases constituting the excess or the outbreak proper were beyond reasonable doubt caused by infection distributed through ice cream, the principal ingredients of which were prepared and distributed from one of the dairy and ice-cream establishments in the city of Chattanooga.

ARE YOU SAVING Your Money to Invest in the SECOND LIBERTY LOAN?

TYPHOID FEVER—Continued.

In a densely settled section, geographically continuous with the city of Chattanooga but outside the incorporated limits of the city, known as "East Lake," typhoid fever was found to be highly prevalent. In a population of about 2,500, over 30 cases were known to have occurred in the months of July and August. According to the evidence obtained it appeared that the typhoid fever in East Lake had resulted largely from local insanitary conditions in respect to the disposal of human excreta. At most of the homes open insanitary privies were in use and at the remainder there were cesspools or poorly constructed and poorly operated "septic tanks." East Lake is on the road between Fort Oglethorpe and Chattanooga.
